CORE COMPETENCIES

- Full-Stack Development
- Mobile & Web Development
- Backend Development
- API Integration
- Database Design
- AI Engineering
- AI-Powered Automation
- Agent-Based Applications
- RAG Implementation

ANGELO SANTIAGO

Full Stack Developer | AI Workflow

Professional Summary

Full Stack Developer and AI Engineer with four years of professional experience building web applications, AI-powered internal tools, and workflow automation systems. Develops end-to-end solutions using React, Next.js, TypeScript, Node.js, n8n, and Zapier — from frontend interfaces to backend APIs and production cloud infrastructure. Experienced in agent-based applications, RAG systems, API integrations, and automation that reduces operational costs and accelerates delivery.

KEY ACHIEVEMENTS & BUSINESS IMPACT

- Built and deployed agent-based automation systems for complex business workflows
- Achieved 40–60% faster delivery cycles through AI-assisted development
- Reduced operational costs by 30–40% through automation and process optimization
- Delivered 25%+ productivity improvements through workflow optimization
- Designed and deployed scalable applications that supported business growth
- Maintained strong code quality while accelerating development timelines

EXPERIENCE

Software Developer | Expert Solution Outsourcing | 2022 - Present

- Developed and deployed scalable web applications using React, Next.js, Node.js, and TypeScript
- Built AI-powered features, including agent-based workflows and RAG applications, for business automation and internal tooling
- Implemented automation solutions using Zapier, n8n, and Google Cloud Functions
- Integrated third-party business systems with websites, forms, APIs, and automated data-sync workflows
- Designed and maintained data pipelines and cloud architecture for performance and reliability
- Used AI-assisted development tools to accelerate delivery by 40–60% while maintaining code quality
- Reduced operational costs by 30–40% through automation and process improvement
- Improved team productivity by 25%+ through workflow optimization and system automation

EDUCATION

Don Honorio Ventura Technological University

Bachelor of Information Technology

FULL-STACK DEVELOPMENT

- Build responsive and scalable web applications using React, Next.js, Node.js, and TypeScript
- Develop frontend interfaces, backend systems, APIs, and database-driven features
- Create maintainable architectures focused on performance, reliability, and business needs
- Work across web, mobile, integrations, and cloud-based deployment workflows

AGENTIC CODING

- Build AI-powered tools, agent-based workflows, and automation systems for real-world use cases
- Develop RAG applications, internal AI tools, and context-aware product features
- Implement workflow automations using n8n, Zapier, and cloud functions
- Use AI-assisted development tools such as Claude Code, Cursor, and OpenCode to accelerate delivery

TOOLS & TECHNOLOGIES

- **Languages:** TypeScript, JavaScript, SQL
- **Frontend:** React, Next.js, React Native, Tailwind CSS, shadcn/ui, Framer Motion
- **Backend & APIs:** Node.js, Hono, Express.js, REST APIs, webhooks, Google Cloud Functions
- **AI & Automation:** Vercel AI SDK, Claude, Gemini, RAG systems, agentic workflows, n8n, Zapier
- **Data & Infrastructure:** PostgreSQL, Convex, Supabase, Pinecone, Docker, Vercel, Railway
- **Integrations & Analytics:** Google Workspace APIs, Stripe, PayMongo, PostHog

SELECTED PROJECT FOCUS

- **Full-Stack Platforms:** Developed scalable web applications with strong frontend, backend, and cloud integration
- **AI-Powered Internal Tools:** Built internal AI systems that support training, knowledge retrieval, and business operations
- **Workflow Automation:** Delivered automations for lead handling, reporting, notifications, and process improvement
- **Business System Integrations**: Connected websites, forms, APIs, and payment systems with automated workflows across business tools
